

**Amendments to the Specification:**

Please amend paragraph number [0010] beginning on page 3 as follows:

In a second aspect of the invention, we provide a polymer comprising residues of a monofunctional monomer having one polymerisable double bond per molecule, from ~~0.3-100%~~ 0.3-100% w/w (of the weight of the monofunctional monomer) of a polyfunctional monomer having at least two polymerisable double bonds per molecule, from 0.0001 – 50 % w/w (of the weight of the monofunctional monomer) of a chain transfer agent and a polymerisation initiator.
